

Southern California Association of Governments

# Southern California Regional Climate Adaptation Framework

## PROJECT BACKGROUND

SCAG is invested in equipping municipalities with the tools and resources to adapt to the challenges of climate change, including impacts from floods, wildfires, sea level rise, extreme heat, and drought. As part of this process, SCAG has engaged Cambridge Systematics and Environmental Science Associates to identify the gaps and needs of its members in climate adaptation. The project includes coordinating regional collaboration for climate adaptation and resiliency planning; developing model adaptation language for General Plans to support compliance with Senate Bill 379 as well as model language for Local Coastal Programs; and developing regional metrics, data, and tracking. Agencies will have access to these materials and tools in 2020.

Do you represent an agency within the **Southern California Association of Governments (SCAG)** region? Would you be interested in participating in a brief interview to discuss your agency's capacity to plan for climate change? If so, please reach out to: **Jeff Caton at [jcaton@esassoc.com](mailto:jcaton@esassoc.com)** or see him at our booth.
